

INSURANCE

Eligibility of Broadcast and Aerial Seeding for AgrilInsurance

Purpose

MASC provides insurance for crops that are broadcast or aerial seeded, provided that steps are taken to minimize the risks associated with seeding by these methods, and that the crop achieves establishment.

Eligibility

In order for broadcast and aerial seeded crops to be eligible for insurance:

- Seed must be incorporated into the soil by mechanical means on or before the associated seeding deadlines for that crop. For clarity, MASC will consider the date of incorporation to be the date of seeding.
- Crops seeded by broadcast or aerial methods must fully establish in order to be eligible for AgrilInsurance.

Failure of Crop to Establish

If the land was too wet to seed by conventional methods, and the crop fails to establish after broadcast or aerial seeding, the insured may be eligible for an Excess Moisture Insurance indemnity.

Verifications

MASC conducts inspections to verify the incorporation of seed and subsequent crop establishment.

Aerial Seeding Reporting Deadlines

The deadline for insureds to report aerial seeding acreage on the Seeded Acreage Report is **June 22** of each year.

Aerial seeded crops reported after June 22 will not be eligible for insurance coverage.

Broadcast Seeding Reporting Deadlines

Crops that are broadcast seeded must be reported on the Seeded Acreage Report by **June 30**.
