Yield Manitoba

a planning tool for Manitoba producers

Welcome to the 17th edition of *Yield Manitoba*, which provides a compilation of actual on-farm yields by variety as reported to the Manitoba Agricultural Services Corporation (MASC) by producers from their respective crop insurance risk areas.

In order for the information to be listed in the table, the variety must have a variety name and been sown by at least three producers on a minimum of 500 acres. This ensures that the sample size is reasonable and protects the confidentiality of individual producer information.

The *Yield Manitoba* yields are “net yields” derived by adjusting the gross yields reported by producers on their MASC Harvested Production Reports (HPR) by the moisture, dockage and test weight, also reported on the HPR. Additionally, when there are measured yields from MASC appraisals or claims those yields will override reported net yields for *Yield Manitoba* purposes. Destroyed acres with no appraisal are reported with a yield of zero. Alternate-use acres with no appraisals are not reported. None of the yields in *Yield Manitoba* are adjusted for grades.

Management and environmental influences have not been standardized in the *Yield Manitoba* variety yield tables so caution should be exercised when doing cross-variety comparisons, particularly when there are limited acres or years of information. Cross-variety comparisons are most meaningful between varieties grown on large acreage over many years. Additionally, to make the best variety selection for your farm it is recommended that you use the information in *Yield Manitoba* in combination with other information sources such as *Seed Manitoba*.

Additional MASC variety information analysis can be conducted on the Internet using MASC’s Manitoba Management Plus Program (MMPP) “Variety Yield Data Browser.” This public online query tool lets you look at variety information to a finer scale (rural municipality) and for more years (back to 1993). The MMPP Variety Yield Data Browser is available at www.mmpp.com/mmpp.nsf/mmpp_browser_variety.html. In addition the MMPP website has other management information useful for benchmarking, marketing assessment and improved farm management decision-making.

You wouldn't have expected it from the weather

by Allan Dawson, *Manitoba Co-operator* staff

Too wet, too dry, late frost, too many hailstorms, too much lodging — Manitoba's 2015 weather didn't feel like it would produce a bumper crop. But it did. Manitoba Agricultural Services Corporation (MASC) data shows yields were above average and new provincial records were set for corn (136 bushels per acre) and soybeans (39 bu./ac.) while canola at 42 bu./ac. was just one bushel shy of the record.

The data collected from farmers enrolled in crop insurance was 99.7 per cent keyed in when this story was written. Final figures could vary slightly, but it won't change the overall result — on average, Manitoba had a bumper crop last year.

The data is in this publication, *Yield Manitoba 2016* and on MASC's Management Plus website at www.mmpp.com. The program lets readers break information out. For example a search can reveal which variety had the highest yield and/or most acres in a specific municipality or province-wide.

Hard red spring wheat averaged 51 bushels an acre in 2015, up one bushel from 2014 and 10 per cent above the 10-year average, but was 10 bushels short of the record of 61 in 2013. It would've been higher had there not been so much lodging.

Feed and winter wheat were all above average too, but no records were set.

Manitoba farmers suffered more hailstorms in 2015 than the year before. While some storms hit in June the most devastating were in August when crops were more mature and had less time to recover before harvest. However, 2015 payouts totalled \$31 million compared to \$12 million in 2014.

Pleasantly surprised

Despite a range of adverse conditions during the season — dry in the northwest, too wet in some areas and extensive lodging, yields were still above average.

"Pleasantly surprised," is how Angela Brackenreed, the Canola Council of Canada's Manitoba agronomy specialist, put it.

"I wasn't expecting it at all," she said. "What stands out for me for 2015 was it was a season of spotty showers and really notable, volatile environmental conditions."

Wheat and canola seeding started a couple of weeks earlier than usual, but widespread frost May 30 set many crops back. About one million acres were reseeded due to frost — most of them canola.

Thanks to warm soils, the reseeded canola emerged quickly, Brackenreed said.

Table 1: MANITOBA AVERAGE CROP YIELDS 2015

Crop	2015 Yield bushels/acre	2014 yield	% change	10- year average	% change	New Record in 2015	Previous Record Yield	Year of Previous Record Yield
Red Spring Wheat	51	50	+2	46	+10	No	61	2013
Winter Wheat	65	52	+25	64	+2	No	71	2008

Non-Oil Sunflowers lbs/a	1,676	1,611	+4	1,466	+14	No	2,192	2012

Source: Manitoba Agricultural Services Corporation data, necessary calculations

The information above is based on 99.7 per cent of the yield and variety data received from crop insured farmers being keyed in. Final figures could vary slightly. Pedigreed seed and organic acres are not included. MASC doesn't release data if it comes from three or fewer farmers or less than 500 acres.

Average Manitoba corn yields in 2015 hit a new record high of 136 bushels an acre, based on 99.7 per cent of yield data collected by the Manitoba Agricultural Services Corporation being keyed in. PHOTO: ALLAN DAWSON

“Emergence was unlike anything I’ve generally seen before with 80 to 90 per cent survival,” she said, adding fortunately there were few disease or insect problems the rest of the year.

Harvesting a bumper crop despite volatile weather speaks well of improved canola varieties and farmer management, Brackenreed said.

Corn

Manitoba’s 2015 average corn yield of 136 bushels an acre beat the 2013 record of 133 and was 26 per cent above the 10-year average.

In late August Dale Alderson of Intel Seeds at Oakville was counting corn kernels and predicting an above-average yield for his customers so long as it didn’t freeze early.

“It was a corn year,” Alderson said.

As a result he expects corn acres could jump 30 per cent in 2016.

“That could change to be more or less depending where corn prices end up in March,” he added. “We could get cancellations, we could get guys ordering more.”

Continued from previous page

Manitoba insured corn acreage fell 11 per cent to 213,314 in 2016, but was 11 per cent higher than the 10-year average.

While Manitoba's corn yield averaged 136 bushels an acre, the Red River Valley's RM of Macdonald had the highest average of any municipality — a whopping 162 bushels an acre from 5,500 acres.

The highest-yielding variety in a municipality was 164

bushels an acre in the RM of Rosser with P7632 AM Pioneer; DKC 30-07 R1B DeKalb had the highest yield province-wide at 151.

Soybeans

When this was being written data showed Manitoba soybeans yielded an average of 39 bushels an acre — half a bushel more than the 2013 record. The final figure could vary slightly.

Continued on page 10

TABLE 2: SUMMARY OF BEST AND WORST 2015 YIELDS FOR SELECTED MANITOBA CROPS

Source: Manitoba Agricultural Services Corporation data, necessary calculations.

The information above is based on 99.7 per cent of the yield and variety data received from crop insured farmers being keyed in. Final figures could vary slightly. Pedigreed seed and organic acres are not included. MASC doesn't release data if it comes from three or fewer farmers or less than 500 acres.

Despite a widespread frost May 30 that saw almost a million acres reseeded, most of it canola, plus hail, Manitoba canola yields in 2015 averaged 42 bushels an acre — just shy of a record. The average canola yield in the RMs of Louise in the south and Swan River in the northwest was 50 bushels an acre on almost 179,000 combined acres. PHOTO: ALLAN DAWSON

Continued from page 8

Soybean yields might have been even higher had it not been hot and dry in some areas in late July and early August.

The highest and lowest soybean yields by municipality were North Cypress and Whitewater at 46 and 28 bushels an acre, respectively.

Canola

At 2.98 million insured acres in 2015, canola was again Manitoba's highest-acreage crop. Plantings were

up three and six per cent from 2014 and the 10-year average, respectively. While the provincial average was close to a record at 42 bushels an acre, canola averaged an impressive 50 bushels an acre in the the RMs of Louise (66,148 acres) and Swan River (112,798 acres). The Canola Council of Canada's 2025 target averaging 52 bushels an acre Prairie-wide seems less daunting now.

Five municipalities shared the highest average yield — 55 bushels — by a single variety. (See table 2 for a list of the varieties and municipalities.)

Table 3: TOP 10 ACREAGE CROPS IN MANITOBA 2015

Rank	Crop	2015 Acres	2014 Acres	% change	10- year average	% change
1	Argentine Canola	2.98 million	2.9 million	+3	2.8 million	+6
2	Red Spring Wheat	2.4 million	2.2 million	+10	2.2 million	+10
3	Soybeans	1.3 million	1.23 million	+6	551,020	+136
4	Oats	413,994	332,371	+25	532,474	-22
5	Barley	353,190	311,079	+14	520,643	-32
6	Feed Wheat	335,273	272,707	+23	45,906	+631
7	Grain Corn	213,314	240,870	-11	192,275	+11-
8	Winter Wheat	144,804	252,586	-43	310,400	-53
9	Dry Edible Beans	117,733	142,955	-18	136,670	-14
10	Flax	109,777	81,130	+35	188,678	-41

Source: Manitoba Agricultural Services Corporation data, necessary calculations

The information above is based on 99.7 per cent of the yield and variety data received from crop insured farmers being keyed in.

Final figures could vary slightly. Pedigreed seed and organic acres are not included. MASC doesn't release data if it comes from three or fewer farmers or less than 500 acres.

Wheats

MASC's red spring wheat category applies to Canada Western Red Spring varieties. At 2.4 million acres, CWRS accounted for the second-highest acreage in 2015, up 10 per cent from 2014 and the 10-year average. Wheat prefers cooler weather than corn, but 2015 saw bumper crops for both.

Extensive lodging was a problem with wheat in some areas, with some farmers reporting their crop going down two or three times.

Feed wheat, which includes Faller and Prosper, two high-yielding American Dark Northern Spring wheats, is gaining popularity. Manitoba farmers insured more than 352,000 acres of feed wheat in 2015 — up 23 per cent from 2014 and six times the 10-year average.

Winter wheat acres of 145,000 were down 43 per cent from 2014 and half the 10-year average.

Feed wheat averaged 67 bushels an acre in 2015, down from 71 in 2014 and the record 78 in 2013.

It was a good year for feed wheat in the RM of Louise where it averaged 86 bushels an acre on more than 10,000 acres.

The data shows Faller and Prosper yields rivalled those of CDC Falcon, Manitoba's second most popular winter wheat, even though it's no longer in the Canada Western Red Winter (CWRW) class because it doesn't meet class requirements.

CDC Falcon averaged 73 bushels an acre in 2015, compared to 69 and 68 for Prosper and Faller, respectively.

In 2015 at almost 80,000 acres Emerson, which is a CWRW variety, was the province's most popular winter wheat, averaging 66 bushels an acre.

Farmers insured almost 30,000 acres of CDC Falcon.

Oats, barley, flax

Oats, Manitoba's fourth-highest-acreage crop in 2015, saw plantings jump 25 per cent to more than 332,000 acres, but that was well below the 10-year average. The 95-bushels-an-acre yield was one bushel higher than 2014's and eight bushels under the record. The highest-yielding variety province-wide was CS Camden — 126 bushels an acre from almost 9,600 acres.

Souris and Summit, which ranked first and second in acres, averaged 96 and 108 bushels, respectively.

RM yields varied from 143 to 19 in Ritchot and Hillsburg, respectively.

Barley acres were up in 2015 but lower than the 10-year average. A provincial average yield of 69 bushels an acre exceeded 2014 and the 10-year average but was well below the 2013 record of 83.

The highest-yielding variety across Manitoba was Xena, which averaged 97 bushels on almost 1,600 acres.

At 23 bushels an acre flax yields were above average and not far off the record of 28. But in the RM of Roland flax averaged 39 bushels an acre on 1,300 acres.

White pea beans, non-oil sunflowers

Both crops yielded well above average at 1,540 and 1,611 pounds an acre but fell short of a record.

The RM of Victoria averaged 2,449 pounds of white pea beans an acre, while Lorne averaged 2,341 pounds of non-oil sunflowers.

2015 was a long and warm growing season for Manitoba farmers, but one with several severe weather events

Weather warming trend continues

by Daniel Bezte, *Yield Manitoba* contributor

Globally, six of the last 10 years have ranked among the top 10 warmest years since 1880 and all 10 hottest years occurred since 1981. The warmest year on record was 2014, but 2015 beat it by a climatological mile.

According to NOAA, 2015 beat out 2014 as the warmest year by 0.16 C, which is the largest jump ever recorded. The second year of a major El Niño event is usually even warmer than the previous year, so 2016 may be the third year in a row that a global yearly heat record is broken. That is something that has never happened in the 136-year dataset.

What concerns me, is that for our region, most of the really warm weather has been confined to our cooler months. Four to seven degrees above average during these months just makes for a nice warm month. The odds will eventually fall on us seeing this type of warmth during the summer, and four to seven degrees above average at that time of the year will create conditions that none of us have ever experienced.

Looking back at 2015, Manitoba's growing degree days accumulation (base 5 C) between May and September was greater than normal at about 96 per cent of about 60 weather stations monitored across the province. In comparison, only 54 per cent of the weather stations reported above-normal conditions in the same duration in 2014. The climate normal is the average of 30 years of observations (1981-2010), and is used to help to flatten or filter out year-to-year fluctuations.

The 2015 growing season began early. Warm temperatures, less-than-average snowpack, and an early spring melt resulted in about 95 per cent of cereal acres seeded in the central region of the province before the second week of May. Significant precipitation occurred on May 14 and 17, resulting in over 75 mm of rain around the central and southwest regions of the province. By the end of May, seeding progress across Manitoba was estimated to be 93 per cent complete.

A light frost that struck some regions on May 30 resulted in some reseeded. Producers started their first hay cut operations mid-June. There were several hailstorms in 2015 affecting Hamiota, Decker, Roseisle, Stephenfield and Miami in June, southwestern Manitoba in July and the Interlake in August.

The first frost was not until Sept. 28, which placed it two to three weeks later than average. Mild fall weather along with above-average October rainfall led to fairly wet soil conditions going into the late-fall freeze-up.

El Niño is expected to remain strong through the Northern Hemisphere winter of 2015-16 and then begin weakening in the early spring, with neutral conditions anticipated by late spring 2016.

This means that producers in Manitoba can expect a higher-than-average chance of a warmer-than-normal winter along with less snow. Warmer temperatures should result in a very low probability of winter wheat kill days, but low snow cover combined with any strong cold snaps that may occur could increase the odds.

While El Niño is expected to become neutral as we move towards summer, there is a lag between warm ocean temperatures and warm atmospheric temperatures. Ocean temperatures are or have just peaked and this extra heat will continue to warm the earth's atmosphere well into 2016. This increases the potential for a hotter-than-average summer.

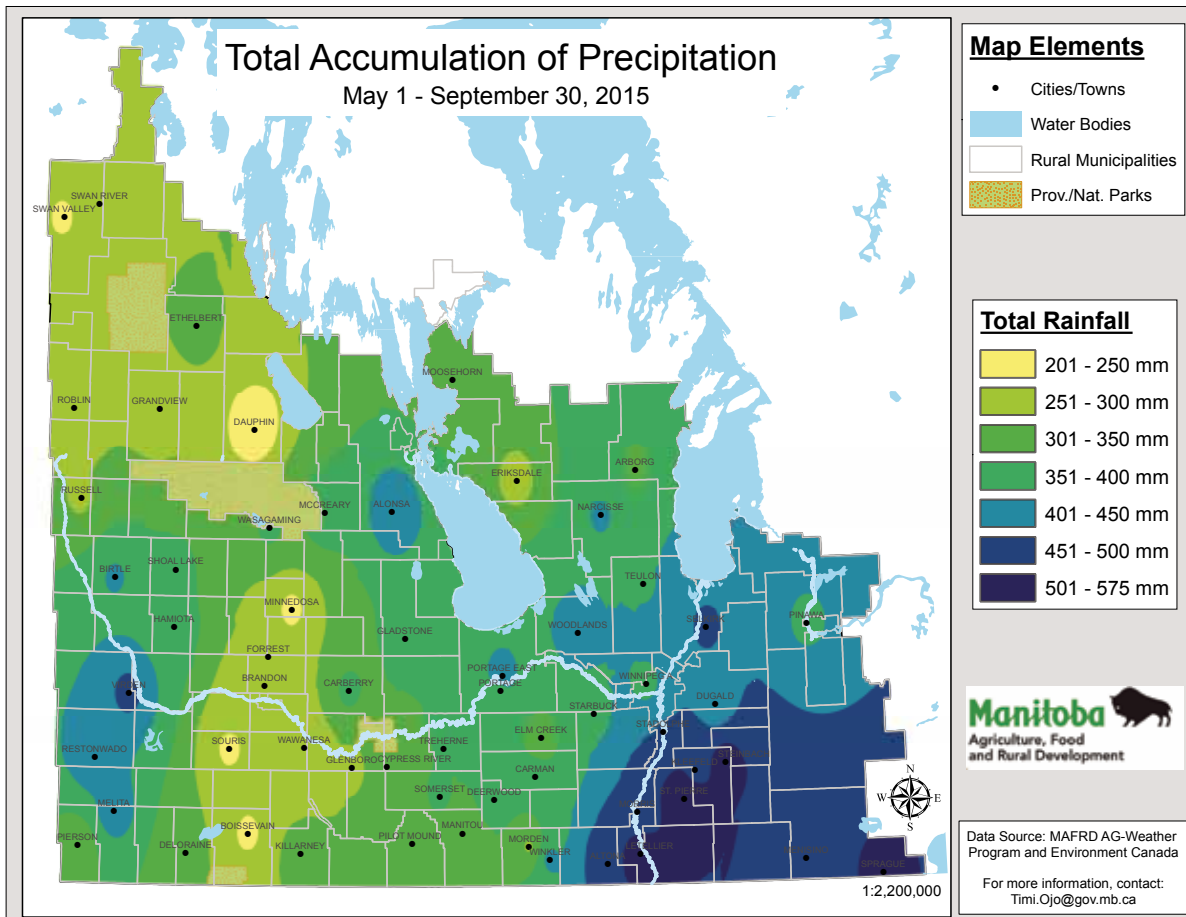

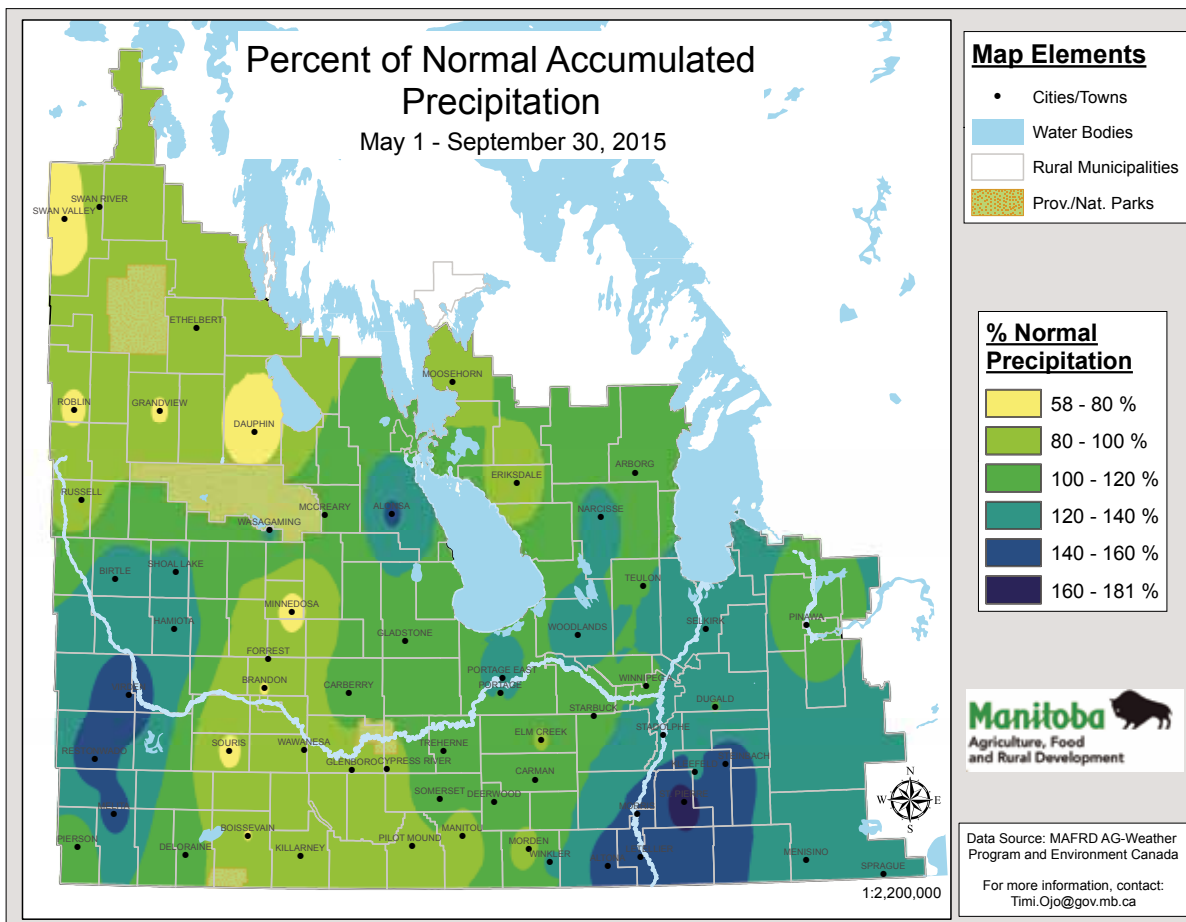

The accompanying maps show seasonal summaries for precipitation, corn heat units and growing degree days. Also attached is the map of fall soil moisture.

Much Later.

Use your AgriCard® to purchase qualifying seed at participating seed dealers today, and enjoy no payments, no interest until November 2016.* Find participating dealers, full details and more at agricard.ca/seednowpaylater.

AgriCard®
agricard.ca

*Subject to approval by Desjardins Financial Group credit department. If the total amount of a purchase made by way of deferred payment financing is not paid in full on the due date shown on the statement of account, it is automatically converted into a purchase by way of equal installments financing, repayable by equal consecutive monthly payments as to principal and credit charges at the annual interest rate for the equal installments financing plan in effect at the date of conversion. The annual interest rate of not more than 15.9% is calculated from the payment due date shown on the statement of account, until such purchases are paid in full. The number of equal monthly payment plan varies from 12 to 36 monthly payments depending on the balance converted. AgriCard® is a registered trademark of Desjardins Financial Group.

Trait Stewardship Responsibilities Notice to Farmers

Monsanto Company is a member of Excellence Through Stewardship® (ETS). Monsanto products are commercialized in accordance with ETS Product Launch Stewardship Guidance, and in compliance with Monsanto's Policy for Commercialization of Biotechnology-Derived Plant Products in Commodity Crops. Commercialized products have been approved for import into key export markets with functioning regulatory systems. Any crop or material produced from this product can only be exported to, or used, processed or sold in countries where all necessary regulatory approvals have been granted. It is a violation of national and international law to move material containing biotech traits across boundaries into nations where import is not permitted. Growers should talk to their grain handler or product purchaser to confirm their buying position for this product. Excellence Through Stewardship® is a registered trademark of Excellence Through Stewardship.

ALWAYS READ AND FOLLOW PESTICIDE LABEL DIRECTIONS. Roundup Ready® crops contain genes that confer tolerance to glyphosate, the active ingredient in Roundup® brand agricultural herbicides. Roundup® brand agricultural herbicides will kill crops that are not tolerant to glyphosate. Acceleron® seed treatment technology for canola contains the active ingredients difenoconazole, metalaxyl (M and S isomers), fludioxonil and thiamethoxam. Acceleron® seed treatment technology for canola plus Vibrance® is a combination of two separate individually-registered products, which together contain the active ingredients difenoconazole, metalaxyl (M and S isomers), fludioxonil, thiamethoxam, and sedaxane. Acceleron® seed treatment technology for corn (fungicides and insecticide) is a combination of four separate individually-registered products, which together contain the active ingredients metalaxyl, trifloxystrobin, ipconazole, and clothianidin. Acceleron® seed treatment technology for corn (fungicides only) is a combination of three separate individually-registered products, which together contain the active ingredients metalaxyl, trifloxystrobin and ipconazole. Acceleron® seed treatment technology for corn with Poncho®/VoTivo™ (fungicides, insecticide and nematocidal) is a combination of five separate individually-registered products, which together contain the active ingredients metalaxyl, trifloxystrobin, ipconazole, clothianidin and Bacillus firmus strain I-1582. Acceleron® seed treatment technology for soybeans (fungicides and insecticide) is a combination of four separate individually registered products, which together contain the active ingredients flupyrroxifluron, pyraclostrobin, metalaxyl and imidacloprid. Acceleron® seed treatment technology for soybeans (fungicides only) is a combination of three separate individually registered products, which together contain the active ingredients flupyrroxifluron, pyraclostrobin and metalaxyl. Acceleron and Design®, Acceleron®, DEKALB and Design®, DEKALB®, Genuity and Design®, Genuity®, JumpStart®, RIB Complete and Design®, RIB Complete®, Roundup Ready 2 Technology and Design®, Roundup Ready 2 Yield®, Roundup Ready®, Roundup Transorb®, Roundup WeatherMAX®, Roundup®, SmartStax and Design®, SmartStax®, Transorb®, VT Double PRO®, and VT Triple PRO® are registered trademarks of Monsanto Technology LLC. REACHING NEW HEIGHTS

with **AKRAS R2**

Designing the ultimate soybean

AKRAS R2 was bred by Elite® and selected from their Western Canadian breeding program because of its excellent yield and industry standard- setting pod height. Higher pods mean easier harvest, fewer pods on the ground and more beans in your bin.

AKRAS R2 also has excellent disease resistance and has an early- to mid- maturity, making it well adapted to all soybean growing areas.

TELL US ABOUT YOUR EXPERIENCE WITH ELITE® SOYBEANS
FROM **BrettYoung:** [@BY_Seeds](#) | [#BYSoybean15](#)

"The trusted high energy barley that gets your stock to market faster"

"We believe Conlon barley is still the only variety that you can count on to consistently have low enough DON to feed hogs & is your plumpest rolling barley! **For best results choose Certified Seed.**"

Walter Smith

- ✓ Bankable Quality
- ✓ Excellent Yields
- ✓ Earliest Maturity
- ✓ Shorter straw with good lodging
- ✓ Best ratings for Fusarium

Raxil PRO SHIELD

Weather or Not

In farming, the only thing that's predictable is how unpredictable things can get; but when you use Raxil® PRO Shield seed treatment with Stress Shield®, you can expect superior disease and wireworm protection, as well as improved yield performance.

With three different fungicidal actives, you also receive full contact and systemic protection from the most dangerous seed- and soil-borne diseases, including *Fusarium graminearum*.

With Raxil PRO Shield, what you seed is what you get.

WEIGHTED AVERAGE YIELD AND TOTAL ACREAGES§						64.5	586,190

† Yields only for those varieties grown on more than 500 acres and by more than 2 growers;

§ Weighted Average Yield and Total Acreage include acres not reported in the table.

¶ For additional characteristic codes, see the key at the end of the Risk Area tables.

† On system as of January 5, 2016;

* Assuming 48 lbs./bu.

Raxil PRO
SHIELD

Stand your ground.

Whether it's wireworms or other seasonal stresses like drought, nutrient loss, and frost, the addition of Stress Shield® in Raxil® PRO Shield helps provide superior emergence, increased vigour and a healthier plant resulting in a higher yield.

With the power of three different fungicide actives, Raxil PRO Shield also provides comprehensive systemic and contact protection from the most serious seed- and soil-borne diseases in cereals, including *Fusarium graminearum*.

The best new herbicide for Clearfield sunflowers. Easily.

Solo ADV
Herbicide

The future looks even brighter for Clearfield® sunflower growers now that Solo® ADV herbicide is here. Its convenient new liquid formulation delivers re-cropping flexibility and control of tough grasses and key broadleaf weeds. And for added convenience, there's a built-in adjuvant to speed up tank fill times. For more information, please visit agsolutions.ca/soloadv or call AgSolutions® Customer Care at 1-877-371-BASF (2273).

Trusted **Souris**
White Milling Oats

"Working Hard To Earn Your Trust"

Earlier Shorter Heavier

- ✓ MB's favourite Oat since 2011
- ✓ **Shortest** Oat on the market
- ✓ **Top Yielding Variety**
- ✓ **Earliest** – 4 days earlier than Summit, 7 earlier than Pinnacle
- ✓ **Heaviest** oat on the market with smaller seed
- ✓ **Accepted by all oat millers**
 - Preferred by Emerson Milling & Quaker Oats
- ✓ **Excellent Disease package**
 - Resistant to Stem Rust

WEIGHTED AVERAGE YIELD AND TOTAL ACREAGES						46.0	1,361

ADDITIONAL CHARACTERISTICS KEY

WHEAT

- (D) Durum
- (ES) Extra Strong
- (F) Feed
- (HWS) Hard White Spring
- (PS) Prairie Spring
- (RS) Red Spring
- (W) Winter

SUNFLOWER

- (C) Confectionary
- (O) Oilseed

CANOLA & SOYBEAN

- (BT) Compas (Bromoxynil) Tolerant (BX), Navigator Varieties
- (LT) Liberty Link (LL) - (Glufosinate Ammonium); Invigor varieties
- (RT) Roundup Ready - (Glyphosate Tolerant)
- (ST) Pursuit Smart, Odyssey (Imazethapyr) (~IMI) ; Clearfield varieties
- (TT) Triazine Tolerant

CORN

- (BT) Contains Bacillus thuringiensis (Bt) insecticidal protein
- (HX1) Herculex insect protection gene
- (LT) Liberty Link (LL) - (Glufosinate Ammonium); Invigor varieties
- (RA) Single bag blend for non-Bt refuge compliance
- (RIB) Single bag blend for non-Bt refuge compliance
- (RT) Roundup Ready - (Glyphosate Tolerant)
- (ST) Pursuit Smart, Odyssey (Imazethapyr) (~IMI) ; Clearfield varieties
- (TT) Triazine Tolerant
- (RIB) Refuge in bag seed blend

† On system as of January 5, 2016;
 * Assuming 48 lbs./bu.
